## **Chino Production Well Rehabilitation Program Well No. 3**

April 2024

### **UTILITY PROJECT**

Production Well No. 3 is one of the key components in the City's water production facilities. The well house, electrical controls, and HVAC components are beyond their useful service life and require rehabilitation and/or replacement. Well No.3 is located in Chino Valley, near the northeast intersection of Road 2 North and Road 1 East. The project generally consists of the rehabilitation of the well itself, the well site, and associated facilities and equipment.

The City's contractor, Fann Environmental LLC, has completed the site and building demolition. The new well building underground mechanical piping is complete. Well condition evaluation and the sanitary seal have been completed. Construction of the underground electrical, building foundation, and stem walls has been completed. Building CMU block walls and roof are 100% complete. Enhancements to the incoming electrical power supply and CMU wall, site gates, perimeter fencing, building piping, and electrical are completed. A new line shaft, the column pipe, discharge head, and the motor have been installed. The removable building over the well has been completed. Entrances have been paved. Start-up occurred the first week in Feb 2024. Final touches are being done to complete the project, awaiting landscape plantings to finish.
