FY24 Micro Seal Preservation

April 2024

ROADWAY PROJECT

The project generally consists of roadway improvements on Willow Creek Road from Green Lane to Iron Springs Road. The scope of work includes lower utilities, profile milling, cleaning out and sealing wide cracks, and applying a double (Type III) micro seal over the roadway to help preserve and extend the useful life of the existing asphalt pavement.

Work also includes the adjustment of utilities with the new top of pavement, installation of concrete collars around utilities for protection, and the installation of pavement markings at the end of the project.

The project started March 21, 2024. Utilities have been lowered and temporarily patched to allow for milling. Crack sealing is currently scheduled for the first week in April and micro sealing for the second and third weeks in April, but both are weather dependent.

The project is expected to be completed by May 20, 2024.
