Chino Production Well Rehabilitation Program Well No. 3

August 2024

UTILITY PROJECT

Production Well No. 3 is one of the key components in the City's water production facilities. The well house, electrical controls, and HVAC components are beyond their useful service life and require rehabilitation and/or replacement. Well No. 3 is in Chino Valley, near the northeast intersection of Road 2 North and Road 1 East. The project generally consists of the rehabilitation of the well itself, the well site, and associated facilities and equipment.

The City's contractor, Fann Environmental LLC, has completed the site and building. Start-up has occurred and the well is in use by the water division. Closeout of the project is underway.
