Yavapai Hills #1 Lift Station Rehabilitation

January 2025

UTILITY PROJECT

This project will upgrade an old, inefficient sewer lift station by constructing additional wet wells and pumps. The rehabilitation will provide additional capacities to handle future build out flows from the Yavapai Hills Subdivision.

The design for the project has been awarded to Water Works Engineers. Fann Environmental has been awarded the construction contract for this project. The ADEQ construction permit has been approved. Construction has begun with clearing of the site and demolition of the old treatment plant. The project is expected to take 365 days to complete.
