## **Pleasant Street Pavement and Drainage Repairs**

April 2025

### **ROADWAY PROJECT**

The project generally consists of roadway and utility trench improvements along Pleasant Street between Carleton Street and Aubrey Street. The primary scope of work is to repair excessive settling along utility trenches that has created uneven pavement and unsafe driving conditions.

Work includes the removal and replacement of the utility trench backfill material, damaged concrete curb and gutter, asphalt pavement, and utility adjustments.

The City awarded an engineering design services contract to Civiltec in November 2024 and anticipates finalizing design drawings by Spring 2025. Civiltec completed 30% design drawings at the end of January for City review.

This project is scheduled to start construction after the completion of a nearby sanitary sewer improvement project. The City anticipates advertising for bids and awarding a construction contract in June 2025, starting construction in late summer or early Fall 2025, immediately following the sanitary sewer project, and completing construction by the end of 2025.
