Downtown Bollard Project

May 2025

ROADWAY PROJECT

This project is located at multiple intersections in the downtown area. The project generally consists of the placement of (Maxi Force) removable bollards throughout the downtown area to provide safe closures of intersections that the city uses for parade routes and special events. This will also help to decrease the labor and equipment cost for closing those routes used for special events.

Road closures to through traffic will be in place during construction with detour routes posted; please follow posted Traffic Control signage. Access to businesses will be maintained as much as possible.

The Phase #1 contract has been awarded to Combs Construction for this project and construction started on March 10, 2025. This project should be completed by mid-May, weather permitting.
