Granite Street, Starpine Place, & Allen Lane Roadway Improvements

May 2025

ROADWAY PROJECT

The project generally consists of roadway, slope, and drainage improvements along Granite Street, Starpine Place, and Allen Lane south of White Spar Road. The primary scope of work is to remove and replace the roadway asphalt surfaces which have deteriorated and are too difficult to maintain.

Work includes the removal and replacement of roadway surfaces, aggregate base, and possibly dirt sub-base. Other improvements may include slope stabilization, protection, and armoring, replacement of damaged curb, gutter, valley gutters, and spandrels, guardrail improvements or replacement, replacement of damaged sidewalk, ADA accessibility improvements at sidewalk ramps, storm water drainage collection and conveyance system improvements, and utility adjustments.

The City is performing the engineering design services in-house and anticipates finalizing design drawings in Fall 2025. The City plans to advertise for bids, award a construction contract, and start construction in Spring 2026. The City anticipates completing construction by Winter 2026.
