Lakeview Drainage Improvements

May 2025

ROADWAY PROJECT

The project generally consists of drainage improvements within a city drainage easement located between Lakeview Drive and Mines Pass. This work includes a new underground storm drainpipe along with an open Rip Rap channel surface to provide erosion protection and to carry stormwater runoff to an existing drop inlet at Mines Pass.

The engineering consultant, JE Fuller, has designed underground stormwater piping conveyance structure in addition to open-channel surface improvements. This project is anticipated to start in late May.
