Copper Basin Area Roadway Improvements

June 2025

ROADWAY PROJECT

The project generally consists of roadway improvements along Copper Basin Road from Sheriff's Posse Trail to City limits, Sheriff's Posse Trail from Copper Basin Road to City limits, Mullen Way from Copper Basin Road to City limits, and Butte Road from Copper Basin Road to the end of the roadway. The primary scope of work is to remove and replace the roadway asphalt surfaces which have deteriorated and are difficult to maintain.

Work includes the removal and replacement of roadway surfaces, aggregate base, and possibly dirt sub-base. Other improvements may include slope stabilization, protection, and armoring, replacement of damaged curb, gutter, and spandrels, shoulder improvements, guardrail improvements or replacement, ground water mitigation along Butte Road, storm water drainage collection and conveyance system improvements, and utility adjustments.

Civiltec was selected from the City's engineering On-Call Services list, to provide engineering design services and was awarded a contract in March 2025. A review of the 30% design is scheduled for June 2025. The City anticipates finalizing design by December 2025, advertising for bids, awarding a construction contract, and starting construction in Spring 2026, and completing construction in Summer 2027.
