Pleasant Street Pavement and Drainage Repairs

June 2025

ROADWAY PROJECT

The project generally consists of roadway and utility trench improvements along Pleasant Street between Carleton Street and Aubrey Street. The primary scope of work is to repair excessive settling along utility trenches that has created uneven pavement and unsafe driving conditions.

Work includes the removal and replacement of the utility trench backfill material, damaged concrete curb and gutter, asphalt pavement, and utility adjustments.

The City is scheduled to complete design in June 2025. This project is scheduled to start construction after the completion of a nearby sanitary sewer improvement project. The City anticipates advertising for bids and awarding a construction contract in August 2025, starting construction in Fall 2025, immediately following the sanitary sewer project, and completing construction by the end of 2025.
