Pleasant Street Pavement and Drainage Repairs

July 2025

ROADWAY PROJECT

The project generally consists of roadway and utility trench improvements along Pleasant Street between Carleton Street and Aubrey Street. The primary scope of work is to repair excessive settling along utility trenches that has created uneven pavement and unsafe driving conditions.

Work includes the removal and replacement of the utility trench backfill material, damaged concrete curb and gutter, asphalt pavement, and utility adjustments.

The design has been completed, bid advertising is scheduled for late June and early July, bid opening for July 24th, and award of the construction contract at the August 26th Council meeting. Construction is scheduled to start immediately following the completion of a sanitary sewer improvement project sometime in late Summer or early Fall. The City anticipates completing construction near the end of 2025.
