Centralization AWRF Solids Handling Facility

November 2025

UTILITY PROJECT

The project generally consists of additions and improvements to the Airport Water Reclamation Facility dewatering operations, including the addition of one (1) new building, one (1) centrifuge or dewatering unit, and one (1) 1M gallon solids holding tank which will ensure the City has the capacity and redundancy for centralizing wastewater processing at the AWRF facility.

Water Works Engineers was awarded a design services contract in September 2024. A 30% design review was completed in July, and a 60% design review is scheduled for November. The City plans to complete design in spring 2026, bid and award a construction contract in summer 2026, start construction in fall 2026, and complete construction by fall 2027.
