South Tank Pipe Lining

November 2025

WATER PROJECT

The project generally consists of repairing leaks to existing inlet/outlet pipes and drain lines at the City owned domestic water storage tank known as the South Tank at 319 South Washington Avenue. This project consists of exploratory investigation of current conditions and creating a plan and bid ready documents to repair the leaking lines with NSF 61 approved liner for potable water.

The City is currently working with an engineering firm with utility design experience to produce a scope and fee proposal to provide engineering services.
