FY26 Crack Seal

June 2026

ROADWAY PROJECT

The Contractor will be applying crack seal to roadways throughout the city to treat existing pavement cracks. This process involves cleaning the cracks and filling them with a flexible sealant. It is a cost-effective maintenance treatment that preserves pavement condition and delays the need for more extensive repairs.

The Contractor is continuing to perform crack sealing operations throughout the city. Crews are progressing through scheduled areas and will continue this work in the coming weeks as part of the ongoing maintenance program.
