Centralization AWRF Solids Handling Facility

August 2026

UTILITY PROJECT

The project generally consists of additions and improvements to the Airport Water Reclamation Facility dewatering operations, including the addition of one (1) new building, one (1) centrifuge or dewatering unit, and one (1) 1M gallon solids holding tank which will ensure the City has the capacity and redundancy for centralizing wastewater processing at the AWRF facility.

Water Works Engineers was awarded a design services contract in September 2024. A 90% design review was completed April 9th. The City plans to complete design in summer 2026, bid, award, and start construction in fall 2026, and complete construction by the end of 2027.
