## **Ken Lindley Green Stormwater Infrastructure**

October 2026

### **UTILITY PROJECT**

As part of the City of Prescott Green Stormwater Infrastructure Program, Public Works is designing rainwater harvesting, erosion control, and stormwater filtering vegetated areas along right-of-way between East Willis Street and the Ken Lindley Skate Park.

The project consists of curb cuts, sediment traps, and vegetated stormwater basins. These features will be designed to trap sediment, filter stormwater, and beautify the park and surrounding area while providing a sound and visual buffer for park users. Stormwater features will reduce *E. Coli* loads into the Virginia St Wash, which carries a USEPA impairment for high *E. Coli* and low dissolved oxygen.

30% conceptual designs have been initiated and are anticipated to be completed late in October 2026.
