Centralization AWRF Solids Handling Facility

November 2026

UTILITY PROJECT

The project generally consists of additions and improvements to the Airport Water Reclamation Facility dewatering operations, including the addition of one (1) new building, one (1) centrifuge or dewatering unit, and one (1) 1M gallon solids holding tank which will ensure the City has the capacity and redundancy for centralizing wastewater processing at the AWRF facility.

Water Works Engineers was awarded a design services contract in September 2024. A 90% design review was completed April 9th. The City plans to complete design by the end of 2026, bid, award and start construction in early 2027, and complete construction in early 2028.
