Country Park Pavement Rehabilitation

November 2026

ROADWAY PROJECT

The project generally consists of rehabilitating the existing asphalt pavement on Country Park Drive, Robbie Lane, Pine Cove Road, and Woodland Hills Road through full-depth pulverization (also known as asphalt pulverizing or in-place recycling). The deteriorated asphalt will be mechanically ground and blended in place with the underlying base material, then re-graded and compacted to form a revitalized, uniform base. A new asphalt overlay will subsequently be placed on this prepared surface.

Within the project limits, existing drainage issues will be corrected, guardrail and posts along the roadway will be repaired or replaced as necessary, and utilities will be adjusted to conform to the revised roadway elevation.

This project is being designed in-house with 30% plans currently under review.
