FY25 Rural Roads Paving

November 2026

ROADWAY PROJECT

The project consists of the replacement of mill paved roads with new asphalt at multiple locations. The roadway width will be maintained where possible; if the roadway is under 20 feet wide, Staff will determine if it is possible to widen the roadway. Some of the roads are one way in and one way out. Drainage on all roads will be analyzed on a road-by-road basis, as they are all a little different. Utility Adjustments for construction will be needed.

This project is in the early 30% design phase; the anticipated start date for this project is to be determined.
