FY27 Pavement Preservation Phase 3 – Northside & Barmar

November 2026

ROADWAY PROJECT

This project includes pavement preservation treatments on portions of Northside Dr, Flora St, Solano Dr, Prescott Heights Dr, Black Dr, Whetstine Ave, Danita St, Barmar Ln, Satellite Ct, Venus Dr, Sequoia Dr, W Delano Ave, Chestnut Dr, Comet Rd, and Hackberry Dr. Treatments include Cape Seal and Seal Coat designed to extend pavement life and improve ride quality. Along with asphalt repairs in areas of pavement failure, the project will include crack repairs, sidewalk repairs, and curb repairs.

Combs Construction has received a Notice to Proceed for the City of Prescott's pavement preservation project, with work scheduled to begin November 2, 2026.

Work will take place at multiple locations throughout the project area as crews progress through the scheduled improvements. The first phase will include asphalt and concrete repairs to prepare the roadways for surface treatments. Surface treatments are scheduled for spring 2027, when temperatures are more favorable for application.

Residents and motorists may experience temporary traffic delays and minor access disruptions while crews are working. Drivers should use caution when traveling through active work zones, follow posted traffic control signs, and allow extra travel time when needed.

The City appreciates the public's patience as these improvements help preserve roadway conditions and extend pavement service life.
