Granite Street, Starpine Place, & Allen Lane Roadway Improvements

November 2026

ROADWAY PROJECT

The project generally consists of roadway, slope, and drainage improvements along Granite Street, Starpine Place, and Allen Lane south of White Spar Road. The primary scope of work is to remove and replace the roadway asphalt surfaces which have deteriorated and are too difficult to maintain.

Work includes the removal and replacement of roadway surfaces, aggregate base, and possibly dirt sub-base. Other improvements may include slope stabilization, protection, and armoring, replacement of damaged curb, gutter, valley gutters, and spandrels, guardrail improvements or replacement, replacement of damaged sidewalk, ADA accessibility improvements at sidewalk ramps, storm water drainage collection and conveyance system improvements, and utility adjustments.

The City is performing most engineering design services in-house but has contracted with Consor Engineers to help design the creek crossing and drainage structures. The city plans to complete design in late 2026, bid, award, start construction in early 2027, and complete construction by the end of 2027.
