Prescott Lakes Parkway Bridge Report

November 2026

ROADWAY PROJECT

This project is located on Prescott Lakes Parkway west of State Route 89. The project generally consists of evaluating and developing repair alternatives for the settlement behind the east bridge abutment has resulted in noticeable depression and bump in the roadway surface, with the most significant settlement occurring at the southeast corner of the bridge approach slab. The City of Prescott has contracted with AECOM to investigate the underlying conditions and develop a report with multiple repair alternatives.

AECOM has completed the geotechnical field investigation and is preparing an engineering assessment. The report includes a topographic survey of a section of the bridge and adjacent roadway, geotechnical borings and laboratory testing. The draft report was received in mid-October 2026 and was reviewed by Staff. The final report is anticipated in mid-November 2026. The report will document the investigation findings, and provide repair alternatives, for the City's consideration. Following receipt of the report, City staff will review the findings and recommendations to determine the appropriate repair approach, project scope, and funding requirements.

The Prescott Lakes Parkway Bridge Report is part of the City's Bridge Maintenance Program. The City is establishing a coordinated approach to reviewing ADOT bridge inspection reports, documenting maintenance needs, prioritizing repairs, and planning improvements through a multi-year budget. The intent is to address bridge deficiencies proactively, extend the service life of City-owned bridges, and allocate available funding based on identified needs and engineering recommendations.
