Streets Maintenance Site Improvements Phase 1

November 2026

FACILITY PROJECT

As the Wastewater Treatment Plant at 1500 Sundog Ranch Road relocates to the Airport Treatment Facility, portions of the existing site will be decommissioned. The Streets Maintenance Division will gradually move its operations into the vacated areas in coordination with planned improvements to the City of Prescott's Solid Waste Facility.

The City is currently working with DAVA and Associates in the design of two (2) new sludge beds and a cinders facility to support the Streets Maintenance Division's winter operations and the Wastewater Division's decanting of material generated by vactor operations.

The project includes demolishing the existing sludge beds, backfilling with suitable material to allow for future site development, establishing a new vactor/sweeper cleanout structure with decanting capabilities, constructing a cinders facility for material storage and mixing, and completing various site modifications to manage surface drainage.

Dava and Associates have been selected to provide engineering design services for this project with 90% plans currently in review.
