Sundog Trunk Main Sewer Phase C3 Project

November 2026

UTILITY PROJECT

The City of Prescott is advancing its long-term wastewater infrastructure centralization program through the Sundog Trunk Main Sewer Phase C3 Project. This critical capital improvement project supports the consolidation of wastewater treatment operations from the aging Sundog Wastewater Treatment Plant to the more modern and expanded Airport Water Reclamation Facility. It addresses capacity limitations, lowers long-term operations and maintenance costs, and heightens overall system reliability for current and future growth while enhancing environmental protection.

This project includes construction of a new Downtown Regional Lift Station near Granite Creek Park/6th Street, approximately 25,000 linear feet of 26” force main routing northward along 6th Street and through multiple local streets to connect with the existing force main at Highway 89/Prescott Lakes Parkway, plus 2,500 linear feet of 24” sewer trunk main and 8” branches along Granite Creek to the new lift station.

The bid process has been completed and bids are currently in review.
