Willow Creek Road Widening Between Jenna & James
SR89 Turn Lane Extension

November 2026

ROADWAY PROJECT

The project generally consists of the widening of approximately 2,540 linear feet of the existing two-lane section of Willow Creek Road to a five-lane minor arterial roadway, including a center turn lane. The improvement extends from the intersection of Willow Creek Road at Jenna Lane to the South, to the intersection at James Lane to the North.

The project will also include the installation of curb and gutter, as well as pedestrian facilities. In addition, the design incorporates approximately 600 linear feet of a southbound turn lane extension on SR 89, beginning at the existing turn lanes at the SR 89 / SR 89A intersection and extending to a point approximately 480 linear feet south of the Jenna Lane / SR 89 intersection.

Lyon Engineering have been selected to provide engineering design services for this project and are working towards a 90% plan set. Construction is anticipated to begin early in 2027.
